

## Market Release Note

MRN-WMS2.5-March2024

---

Product number:	WMS
Product description:	Tecom Web Management System
Product version:	2.5 2024
Release date:	March 2024

---

Aritech is pleased to announce the availability of the latest Tecom Web Management system, WMS 2.5 2024.

### Improvements

- Multi-site user management
- Enhanced API calls

WMS operators now have the ability to add Controller Access Groups to Tecom Challenger Plus panels and bring them together using Unified Access Groups. Using these tools, operators can effectively create access for panel users across multiple Tecom Challenger Plus panels in a greatly reduced amount of time.

To complement the above, the WMS API has been enhanced to include specific calls enabling integrated systems to leverage this feature.

### Documentation and Downloads

The latest WMS datasheet can be found at [here](#).

The latest WMS version can be downloaded on request by contacting your authorised Aritech representative.

### Support

WMS support is provided only to those with an active SUSP (Software Upgrade and Support Plan). Please refer to the details of your SUSP to receive support.
