	Tecom Comparison Matrix
Technical Manuals	Challenger Series Programming Manual
	Challenger Series Users Manual
	Challenger Series Administrators Manual
	Challenger Series Installation and Quick Programming Manual
Firmware Download	Challenger10 Firmware
	CTPlus Firmware

Known issues

- Any Challenger10 or ChallengerSE panel upgrading from a version of firmware older than V10-06 will be classed as a new panel type when updated to this firmware. This means that the panel record will need to be converted to the new type in the software (Security Commander, Titan, Forcefield). Please refer to the manuals or call the technical support department if further information is required.
- Non-pollled peripherals are not backed up or restored when using the SD card.
- When using a TS1084 IUM, usernames are not stored in the panel.
- When the option for 'Enable V8 Numbering' is toggled, input programming and numbering will not be altered. If this option is set incorrectly, inputs may not function as expected, and input names may appear to be incorrect.

Support

Please refer to the manuals and documentation on the [Carrier Fire & Security Support Portal](#) for more information.

For technical support, we encourage you to contact [Hills Technical Support](#) for all technical support calls. Alternatively you can log a support call on the [Carrier Fire & Security Support Portal](#).
