

Market Release Notice

MRN-WMS2.1.5-1.39

Product number:	WMS-STANDARD, WMS-ADVANCE, WMS-ENTERPRISE
Product description:	Web Management System for Challenger10 and ChallengerPlus
Product version:	WMS 1.39-55401.1918
Release date:	10 March 2021

WMS is a web-based system that allows the operator to generate reports, control devices and manage users from Challenger10 and ChallengerPlus panels.

New features

- CTPlus integration allows hundreds of panels to be configured and saved via WMS.
- Addition of more card formats.
- Control of Relays on panel.
- New API call added to get a user or a list of users.
- Import panel name during auto enrolment of panel.

Resolved Issues

- Fixed an issue where Websocket API events has timezone calculated based upon received time rather than device time
- Back-end services: Illegal URL characters in database can cause connection issues
- Added NTP service into deployment

Known issues

- Reports: Late open report is not always showing correct content
- Auditing compliance report: Selecting device time takes longer than 30 seconds
- Event auditing error when lots of events are actioned at the same time

Support

Please contact technical support on the [Carrier Fire & Security Support Portal](#) for more information.
