

Release Notes

MRN-WMS2.2-60076.1998

Product number: WMS-STANDARD, WMS-ADVANCE, WMS-ENTERPRISE

Product description: Web Management System for Challenger10 and ChallengerPlus

Product version: WMS V2.2-60076.1998

Release date: 5 October 2021

WMS is a web-based system that allows the operator to generate reports, control devices and manage users from Challenger10 and ChallengerPlus panels. This version includes the following improvements:

New features

- Support NAC 8 door mode for control/status.
- Support Lifts support (NAC TS1066/1067/V8 Lift Controller/Standard) via GUI and REST API. Supports Control/Status query of Floors.
- Support new REST API input parameters to allow queries based on Panel Name and Serial Number.
- Enable modifying Panel Name/Serial Number via REST API.
- New REST API calls added to retrieve comms path configuration from panels.
- Support for Network Trace, Application configuration parameters like URL and log level tuning from GUI for diagnostics.

Resolved Issues

- Fixed an issue where panel path status shows duplicate paths
- Fixed an issue where REST API shows an error when inputs names have symbols.
- Fixed an issue where websocket client uses old information when updated through REST API
- Fixed an issue where "All Offline" account code in the GUI is not used.
- Fixed an issue where Operator form would intermittently not save changes.
- Fixed an issue where Database size report would not show number of events purged
- Miscellaneous API improvements

Known issues

- High memory usage when WMS is configured a certain way.

Support

This update is available via request. Please contact technical support on the [Carrier Fire & Security Support Portal](#) to request an upgrade.
