

Power Distribution Board

TS1044

Overview

The Tecom Power Distribution Board can be used to connect cables to the Challenger panel or Intelligent Access Controller, in a neat, compact manner.

There are six sets of terminals for RS-485 LAN and power, any one of which may be used to go back to the panel, with the other five going out to other LAN devices. This makes the Power Distribution Board ideal for star LAN configurations.

The Power Distribution Board has a Tecom 'B' board footprint for mounting in existing Tecom enclosures.

Features

- Supports all Tecom control panels
- 6 sets of terminals
- Keep wires in place, easily trace back to their source
- Compatible with existing Tecom enclosures
